

# Dishwasher AEG eco favorite hums monotone!

## Program does not run!

After draining the bottom of the dishwasher is again all right!

Written By: [www.oekollege.de](http://www.oekollege.de)

## INTRODUCTION

Sketch what you're going to teach someone, and how.

## Step 1 — At its own risk and responsibility

- **IMPORTANT:** The repair of your unit is of course **AT YOUR OWN RISK** and **AT YOUR OWN RISK**. I do not take responsibility for the effect and impact of your actions. I can not grant 100% completeness of the instructions. Those who act according to these instructions, agrees with what is written here.
- Instructions based on <http://www.gutefrage.net/frage/geschirrs> ... THANK YOU!

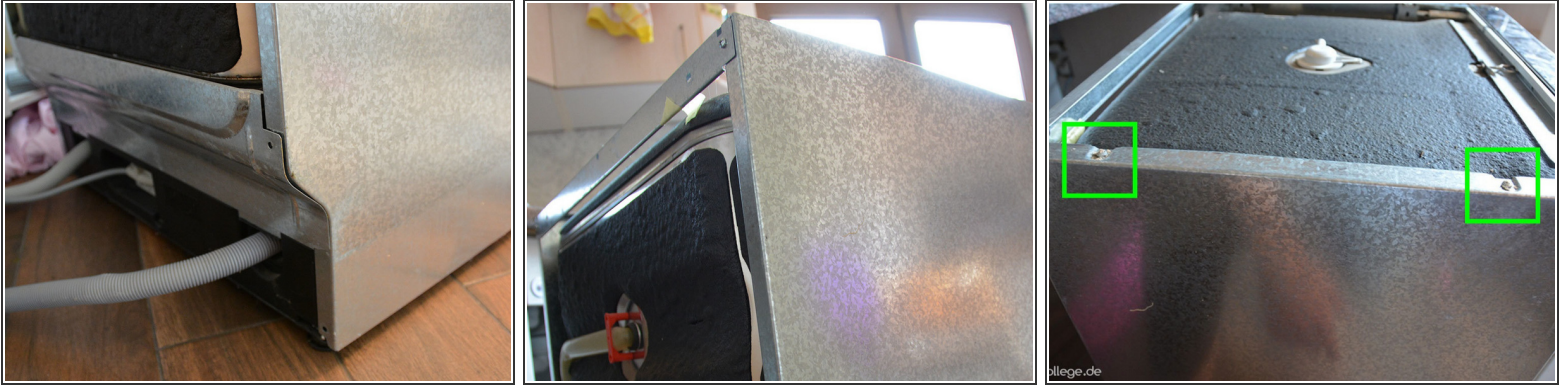

## Step 2 — aid

- screwdriver
- altes Tuch (Laken)

## Step 3

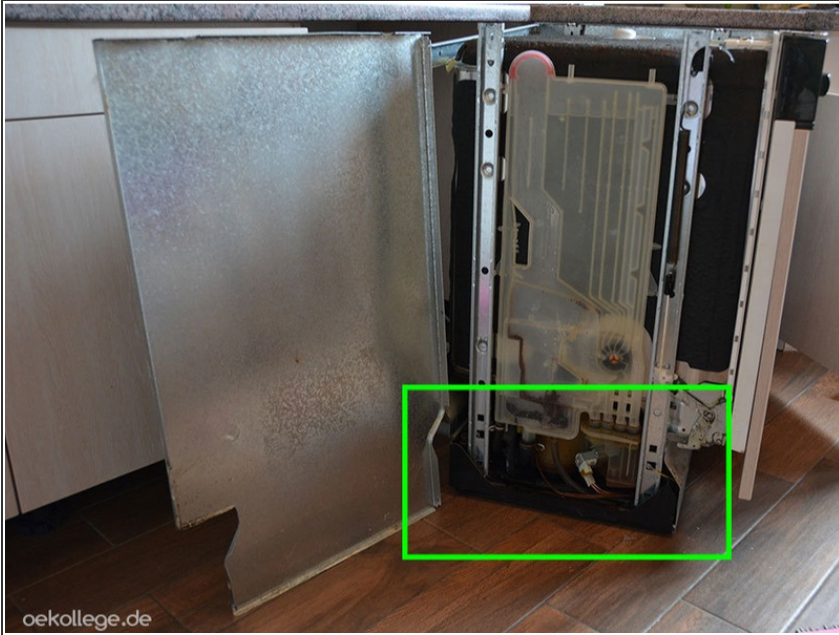

- unplug the power cord from the wall outlet before servicing.
- Left side cover degrade ...

## Step 4

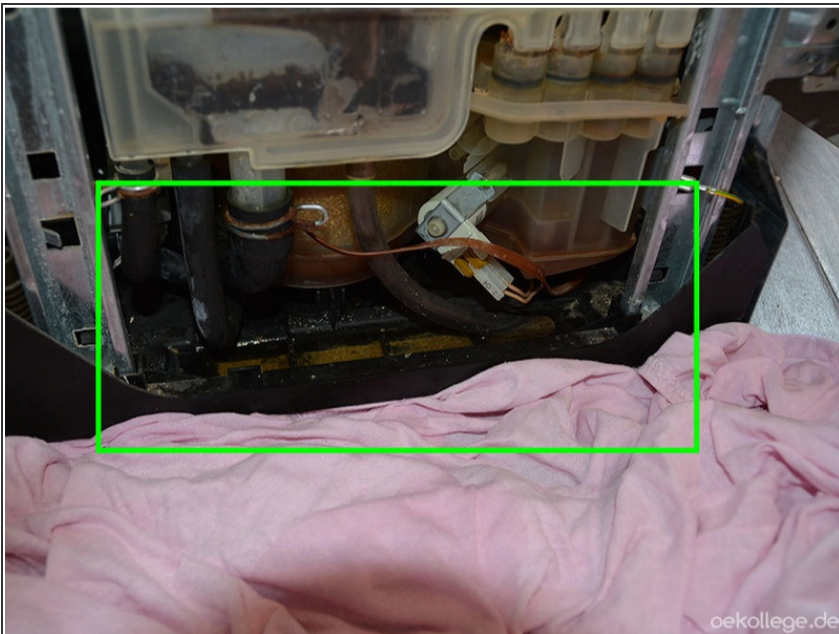

- On this screen, only 2 of the 3 screws are relevant to the side trim.

## Step 5 — Open set!

- ... Remove the side cover.
- Attention: The right side of the trim sits a little harder. Do not be shy. Simply pull out with a little more effort. It is edged stronger at this point (clamped).
- "Now the place of sorrow is disclosed." ...

## Step 6 — Water accumulation on the machine floor

- ... At the bottom of the dishwasher is a lot of excess water has accumulated. The dishwasher is thinking, "if this continues, I run out and the kitchen is placed under water. I stop my work better. "Anyway, I imagine it to be like this. M Just repair layman ....

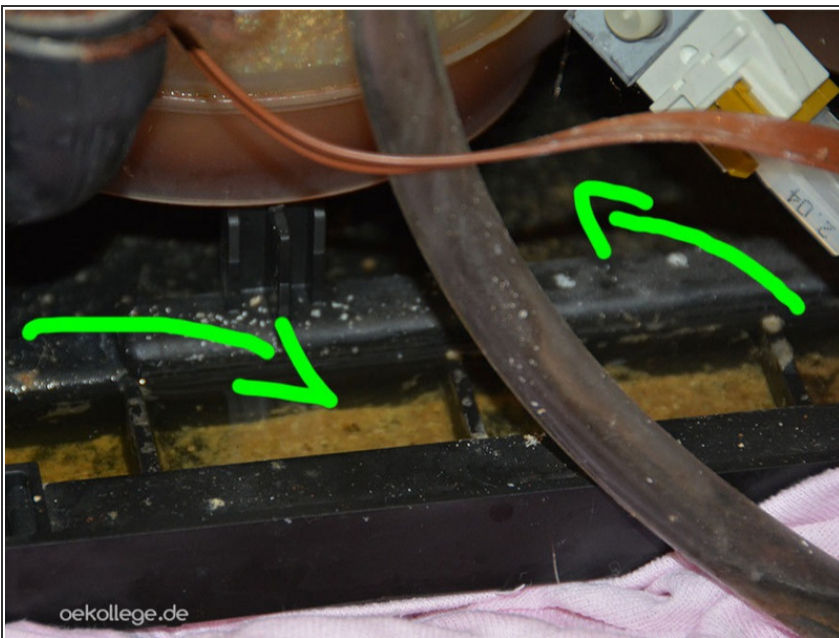

## Step 7

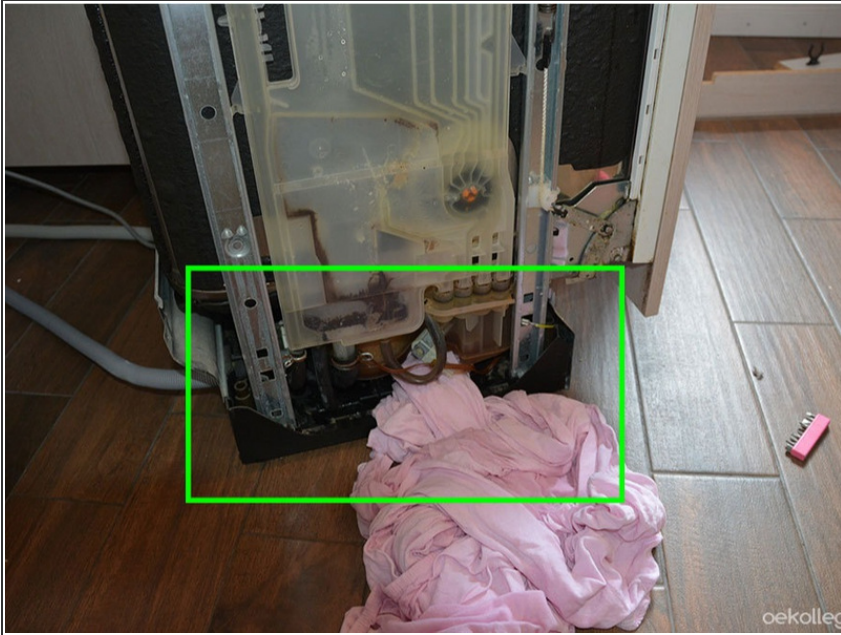

- ... The excess water comes apparently from the overflow tube (times from the machine brought: see in the middle of the green box) ...

## Step 8

- Here is a close-up. Dirt and water as far as the eye can see. Ugh Ugh. ...

## Step 9

- ... Take your best a large sheet or a large rags (absorbent cloth should be, otherwise you have the soup maybe anywhere, but not on your towel) ...
- ... Put it just below the machine and they cant on the open side, so that the excess water can flow from the machine base on the cloth ....
- ... Not everything is running -Due the small ground-Randbarriere- in the cloth. You have to help out. Take the cloth and try dabbing the residual water at the bottom of the dishwasher. Button you doing a little before in the interior of the machine ....
- ...But carefully! No Gebamsel tear. Whether there also dangerous Electronics hangs (for discharge of capacitors), I can not say. But I do not guess. Something like would have to be installed properly and safely, so you do not drankommt there so fast ....
- ... By the way you can of course also the accumulated dirt, as much as possible, remove up! ...

- ... Is that all done, you bring possibly the overflow tube in its correct position and simply unscrew the side

bezel. Plug in and possibly hoses off. To turn on. FINISHED! (So for me it was in any case again!)

- Instructions based on <http://www.gutefrage.net/frage/geschirrs...> THANK YOU!
- 

Arbeite die nötigen Schritte in umgekehrter Reihenfolge ab, um dein Gerät wieder zusammenzubauen.
